What the public record shows

Date	Location	Failed on
2026-04-10	5211 W North Ave	Food not properly labeled / stored in coolers & dry storage
2026-04-07	5211 W North Ave	No hot water at restroom & prep handsinks
2026-03-24	411 S Kedzie Ave	No certified food manager with a valid City certificate

Three failures across two locations in ~three weeks — all public today.

The pattern that matters

The same category of failure — basic food-safety controls and a missing certified manager — appeared at more than one location. That is the signature of a control gap between sites: what one location fixes, the other doesn’t know about. The North Ave site failed twice in three days. This is a visibility problem, and it is fully fixable.

What it costs beyond the citation

- Re-inspection fees, and repeat failures push toward license action.
- Every failure is visible right now to customers, your landlord, and your insurer.
- Inspectors return to repeat sites sooner — the pattern predicts the next visit.

What “ahead of it” looks like

One governed board across every location and legal entity: certificates and training tracked with expiry alarms weeks ahead, a per-site readiness checklist, and an on-premises AI analyst that ranks which location is most exposed this week — your data never leaving your building. Multi-location operators are our exact specialty.

“Did you know your spring inspections are on the city’s public site, for anyone to see? I built a platform that already has your locations in it — it would have flagged the expired food-manager certificate and the labeling gaps before the inspector walked in. Twenty minutes; let me show you your own board.”

This brief is complimentary and yours to keep, whatever you decide.

INTERNAL — REMOVE BEFORE SENDING: Draft — verify which locations are one ownership group (JJ Fish is franchised) before sending.
