

SHARKS FISH & CHICKEN

Prepared 2026-07-17 · Source: City of Chicago public food-inspection records · MagDynamics / ECARMF

What the public record shows

Date	Location	Failed on
2026-06-26	400 E 87th St	Person in charge without proof of food-safety training
2026-06-25	1538 E 87th St	Inadequate supplies to clean up vomit/diarrhea events
2026-06-05	9800 S Halsted St	No valid Chicago food-sanitation certificate
2026-05-13	2018 W 63rd St	No employee health policy on site
2026-03-23	1734 E 71st St	No handwashing cleanser at the handwash sink

Five failures across five different locations since March — every one public.

The pattern that matters

The same class of control failures — missing certifications, missing health policies, missing supplies — repeating across five separate sites. No single manager is the problem: each location is running blind to the others, with no shared board telling headquarters which site is about to fail next. That gap is precisely what our platform closes.

What it costs beyond the citation

- Re-inspection fees, and repeat failures push toward license action.
- Every failure is visible right now to customers, your landlord, and your insurer.
- Inspectors return to repeat sites sooner — the pattern predicts the next visit.

What “ahead of it” looks like

One governed board across every location and legal entity: certificates and training tracked with expiry alarms weeks ahead, a per-site readiness checklist, and an on-premises AI analyst that ranks which location is most exposed this week — your data never leaving your building. Multi-location operators are our exact specialty.

Email opener: “Part of my work is reading public enforcement records, and Sharks Fish & Chicken came up: five failed inspections across five locations since March, all public. My team prepared a one-page brief on what the record shows and how multi-location operators get ahead of the pattern. Complimentary, yours either way — want it?”

This brief is complimentary and yours to keep, whatever you decide.
